

## Securing the CHAS Accreditation. A Commitment to Safety Excellence

We are proud to announce that this month, we have achieved CHAS Accreditation. The scheme ensures we meet legal requirements and comply with industry regulations.

### Importance Of CHAS Accreditation

CHAS accreditation is crucial for us at Kent Electrical Solutions Limited. This certification shows our strong commitment to health and safety standards. It improves our credibility and helps us stand out in the competitive market. Clients trust us because we prioritise safety on every project.

### Compliance With Health And Safety Regulations

The process involves completing several modules that assess our practices. These modules confirm that we meet strict industry standards. This compliance ensures a safe working environment and reduces accident risks. CHAS Elite members, like us, benefit from 13 comprehensive assessment modules designed for high compliance levels.

## Our Journey To Accreditation

### Initial Preparations

We began our preparations by developing comprehensive health and safety policies in line with UK regulations. We implemented regular training programs for our staff to keep them updated on current safety practices and procedures. We also conducted rigorous risk assessments to identify potential hazards and create effective strategies to mitigate them.

### Challenges Faced

We faced strict compliance requirements with regulations stated in the Health and Safety at Work Act 1974 and the Construction (Design and Management) Regulations 2015. We also prepared for ongoing audits and assessments to demonstrate our commitment to compliance.

### Impacts Of CHAS Accreditation On Kent Electrical Limited

We hope CHAS accreditation will significantly impact Kent Electrical Solutions Limited's operations and market presence.

# Progress Update: The MET Building, Fitzrovia

We're excited to share the latest on the infrastructure upgrades underway at The MET Building in Fitzrovia. Our team has been hard at work, and the results are already starting to show.

## High-Spec Data Cabling: Built for Today, Ready for Tomorrow

One of the standout features of this upgrade is our approach to data cabling. By organising cables into neat looms of 24 and routing them directly into the new comms cabinet room, we're ensuring the kind of order and efficiency that modern businesses demand. Why does this matter? Well-organised cabling isn't just about aesthetics—it's crucial for keeping your network fast, reliable, and easier to manage as your needs grow.

Industry trends point to structured, organised cabling as the gold standard for commercial spaces. This method makes it simpler to troubleshoot issues, minimises downtime, and prepares your office for future expansions or new technologies. Neat cable looms also reduce the risk of signal interference and make routine maintenance a breeze, meaning less disruption for your business and more peace of mind for your team

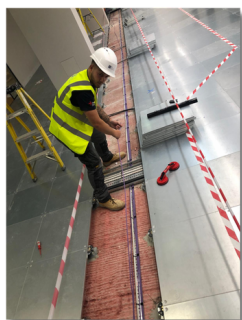

## What's New in the Comms Cabinet Room?

The new communications cabinet isn't just a box for cables—it's the nerve centre for your building's connectivity. Our installation follows the latest industry guidelines for airflow, accessibility, and future-proofing, ensuring that your network infrastructure will continue to deliver top performance for years to come

## Celebrating Team Milestones: Growth and Achievement This Month

This month, we're excited to share two big milestones for our team that highlight both growth and commitment to excellence.

consistently stand out in the industry.

First, join us in congratulating Apprentice Brayden Wood. Braydan started with us from scratch and has now officially embarked on a four-year JTL apprenticeship. This is no small feat—JTL apprenticeships are nationally recognised for setting high standards in training, and their graduates

consistently stand out in the industry. Braydan's journey from zero experience to landing a coveted place on this programme reflects both his determination and our shared investment in developing new talent.

At the same time, Jak Gallagher has achieved his ECS Gold Card. In the UK electrical industry, holding a gold card means you're fully qualified, legally certified to work unsupervised, and recognised for meeting rigorous national standards. It's a mark of trust, skill, and professionalism that assures our customers and partners they're in safe hands.

These achievements aren't just personal wins—they're a testament to our team's dedication to quality and continual professional development. Thank you for being part of our journey. We can't wait to deliver even more value to you with the skills and drive our people bring every day.
